Visual Studio Code is a great editor for PHP development.

You get features like

- syntax highlighting and bracket matching,
- IntelliSense (code completion), and
- snippets out of the box and you can add more functionality through community-created VS Code extensions.

There are many PHP language extensions available on the VS Code Marketplace and more are being created.

You can search for PHP extensions from within VS Code in the Extensions view (Ctrl+Shift+X) then filter the extensions dropdown list by typing 'php'.
